We have exclusive contracts with many guaranteed members of this the greatest underwriting association in the world, by which we are able to immediately cover large amounts on desirable risks *irrespective of other amounts on the same properties* obtained through other channels.

For more than thirty years we have conducted this department of business with European and American companies and our facilities are unequalled.

There never is trouble, vexation, or delay in the adjustment of losses when forms have been drawn and risks have been placed through our office.

ATTORNEYS AND COUNSELORS

SPECIALLY QUALIFIED TO

HANDLE INSURANCE CASES.

It is a well-known fact that few lawyers are competent to properly handle an insurance case without a special knowledge of the business, however skillful they may be as general practitioners. We have requested from a large number of well-known underwriters the names of attorneys whom they have found to be competent and satisfactory in the conduct of cases placed in their charge. The following list is made up of the names thus voluntarily given, together with a few others who have given special attention to insurance law

Automatic Sprinkler Protection

Automatic Sprinklers extinguish fire by outwitting it, while it is still small, before it can grow big. Their use is the only solution of the problem of F re Waste in the United States, equal to $30,000.00 every hour of each day, and seventy percent preventable.

In the first five minutes of any fire one sprinkler can do more good than a fire department arriving twenty minutes later.

Automatic Sprinklers are always ready with water at the start of a fire; they open only where the fire is located; they sound an alarm for help and start putting out the fire right then.

INTRODUCTION TO APPENDIX.

FIRE DEPARTMENTS AND WATER SUPPLY.

The statistics given herewith are the culmination of forty-one years' effort on the part of The Spectator Company to perfect them, and cover the whole field of Water-Works Systems and Fire Department equipment of the cities, towns and villages of the United States and Canada, being the only publication of its kind in existence. The information has been compiled with great care for the present edition and corrected to June 1. The plan is to include every place having a population of 1,000 or more, and wherever a fire department was reported among the smaller towns it has been inserted in this work. During the years this work has been published, it has been the aim of the publishers to improve upon it each year and to add places where Fire Protection and Water Supply have been put in since the previous publication. It is now the most perfect statement of such information that has ever been prepared. These reports have already proved invaluable to fire underwriters, manufacturers and others, and it is our purpose to extend and improve them from year to year. The populations as given in these reports are taken from the official census of 1910, except in a few cases where later information was obtained.

We desire to extend our thanks to all persons who have aided us in collecting these statistics, either by filling out the blanks sent to them or otherwise contributing to secure accuracy.

Underwriters' Ratings.—The underwriters' ratings given in the following pages are generally in accordance with the specifications here outlined:

First Class.—Full paid fire department, electric fire alarm system and adequate water-works.

Second Class.—Volunteer or partly paid fire department; with engineers and drivers fully paid and always on duty, and adequate water-works.

Third Class.—Volunteer fire department and fair water supply.

Fourth Class.—Facilities inferior to those of third-class towns.

Fifth Class.—No fire protection.
